Disable Logs Easy Dev Dunk Studio

Disable Logs Easy

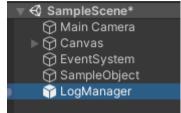

How to use:

Method 1 (prefab):

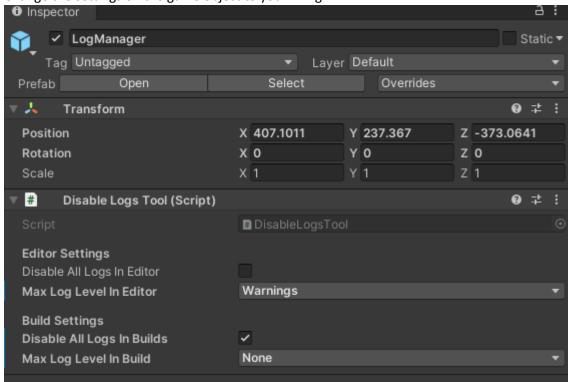

- Open the scene of your game which starts first
- Go to the prefabs folder in Dev Dunk Studio/Disable Logs Easy

- Drag the *LogManager* prefab into your scene

Change the settings on the game object to your liking

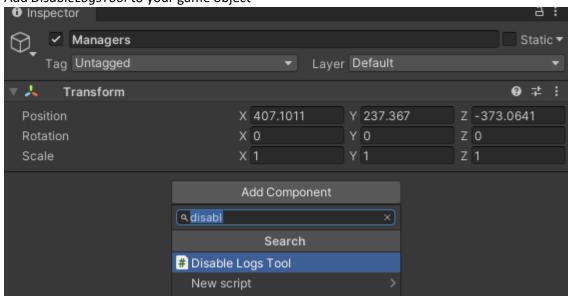

- It works

Disable Logs Easy Dev Dunk Studio

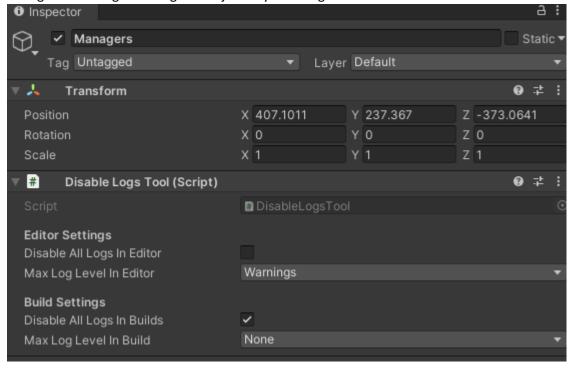

Method 2 (add component manually):

- Open the scene of your game which starts first
- Click on any game object in your scene which is active when the game starts (recommended to not use any prefabs)

Add DisableLogsTool to your game object

- Change the settings on the game object to your liking

- It works

Disable Logs Easy Dev Dunk Studio

How to change settings using code (does not save settings after stopping):

- Add using LogsTools; to the top of your script
- DisableLogsTool.ToggleLogs(bool); to enable or disable logging
- DisableLogsTool.ChangeMaxLogType(WhatToLog); to change the max allowed logs
- DisableLogsTool.EnableAllLogs(); to enable all logs
- DisableLogsTool.EnableAllLogs(true); to enable all logs, only in builds
- DisableLogsTool.EnableAllLogs(WhatToLog); to enable logs until the specified type
- DisableLogsTool.DisableAllLogs(); to disable all logs
- DisableLogsTool.DisableAllLogs(true); to disable all logs, only in builds

WhatToLog explained:

```
public enum WhatToLog
{
    AllLogs,
    Assert,
    Warnings,
    Errors,
    Exception,
    None
}
```

WhatToLog is an enumerator containing all log types in order. If you select 1 value, that type of log and those below it will still log (if logging is enabled).

Example:

If you select warning, regular logs will not get logged, while warnings, errors and exceptions still pop up!
